PROFILE

I am a Backend developer specialising in API design, database architecture, authentication systems, and scalable application logic. Founder of Stravon Tech Labs. Currently building client projects including a production rental e-commerce platform. Capable of contributing across the full stack to deliver complete products.

I also have a working knowledge of graphic design, and the different tools involved, which informs how I approach UI decisions and collaborate with designers.

ACHIEVEMENTS

2nd Place — Software Development | *Mt. Kenya West TVET Fair 2025, Nyeri National Polytechnic* | Sep 2025

Competed in the ICT / Software Development category, building an e-commerce site. Getting a certificate in the process. Project subsequently selected for display at further exhibitions. Have participated in TVET skills fairs since 2024.

EXPERIENCE

Founder & Lead Developer | Stravon Tech Labs *Nov 2024 – Present*

- Designed and built Stravon CMS — an internal content management system for generating and distributing social media content across the team.
- Developing a rental e-commerce platform for an external client, handling requirements gathering, system architecture, and full backend implementation.
- Leading website redesign for Stravon Tech Labs, rebuilding frontend and backend infrastructure.
- Managing a two-person team (development + graphic design) and coordinating delivery of client projects.

Peer Instructor — Web Development | Murang'a Technical Training Institute *Jun 2024 – Sep 2024*

- Assisted in delivering web development instruction to fellow students while concurrently enrolled in the ICT programme.
- Covered core web technologies and practical development skills during the transition between second and third year of study.

Reference Former Head of Department, ICT – Murang'a Technical Training Institute

PROJECTS

Golden Rentals — *Next.js, React, PostgreSQL, CSS*

Rental marketplace connecting tenants and property listers. Listers post properties; tenants browse and contact listers directly. Currently in final week of development.

github.com/Eng-James-Njagi/Golden-Rentals

Murang'a TTI — Website Redesign — *Node.js, Express, EJS, bcryptjs, express-session*

Full redesign of the Murang'a Technical Training Institute website. MVC architecture with session-based authentication, flat-file CMS, and password hashing. Deployed on Vercel.

murangatti-website.vercel.app | github.com/Eng-James-Njagi/MurangaTTI-schoolwebsite

Stravon CMS — Internal Content Management System — *Next.js, React, MongoDB, JavaScript, CSS*

Internal CMS built for Stravon Tech Labs to generate and distribute social media content across the team.

github.com/Eng-James-Njagi/Stravon_CMS

GSSSMS — Stock Management System — *Next.js, React, JavaScript, CSS*

Stock management system that tracks inventory and automatically calculates profit, loss, and stock shortages.

github.com/Eng-James-Njagi/GSSSMS

Reference Client

ROMIS — Repository and Order Management System — *Node.js, EJS, HTML, CSS, JavaScript, SQL*

Order and inventory management system for a school environment. Students access resource recipes for classes; system generates passive revenue for the institution.

TECHNICAL SKILLS

Languages: JavaScript, Java, SQL, HTML, CSS

Runtime: Node.js

Frameworks: Express, React, Next.js, Angular, Vue

Databases: PostgreSQL, MySQL, MongoDB

Core areas: REST API design, database normalisation, authentication & security, payment integrations, MVC architecture, CMS development, version control, Vercel deployment

EDUCATION

Technical ICT Technician Level 6 (Diploma) | Murang'a Technical Training Institute *Expected Jun 2026*

Final examination pending. All coursework complete.
